How to Calculate Product Suitability

Buildex suggests a minimum embedment depth of 25mm for roofing screws being installed into timber. However the actual length of fastener selected needs to match the cladding suppliers fastening recommendation.

Length Description

Sealing Washer Screw Selection without Insulation.

The Grip Length must be equal to or shorter than the Profile Height.
The Embedment Depth must be equal to or longer than 25.0 mm.

Sealing Washer Screw Selection with Insulation.

The Grip Length must be equal to or shorter than the Profile Height and the Compressed Insulation Thickness Combined.
The Embedment Depth must be equal to or longer than 25.0 mm.
